**Proxima Software releases FontExpert 2007 Version 9.0 Font Manager for Windows**

*Version 9.0 is new major release incorporating several new enhancements that include assigning keywords, ratings and categories to fonts, quick search for fonts in the database, enhanced font thumbnails preview, search for duplicate fonts by glyph data, new font printing reports.*

May 26, 2007 - Proxima Software today has announced the release of FontExpert 2007 version 9.0 font manager for Windows.

This release incorporates many new enhancements including:

- Tags view to assign keywords, categories, ratings and captions to selected fonts;
- Database Search view for quick search by font name, keywords, categories or ratings;
- Folders view with win explorer-style browser;
- Main view can display font samples of arbitrary size in many columns (replaces former Font Faces view and Files view);
- Find Fonts feature now can compare glyph data when searching for duplicates;
- Drag and drop font files between Folders and Fonts views;
- New printing reports - Text Sample can be printed in 2 or 3 columns.

The complete list and description of new features can be found in the release notes for the product, found on the company's website, [www.proximasoftware.com/fontexpert](http://www.proximasoftware.com/fontexpert).
