**Proxima Software releases FontExpert 2009 Version 10.0 Font Manager for Windows**

*Version 10.0 is new major release incorporating several new enhancements that include Create Library, Backup, Restore features, search for fonts in the database by Panose classification numbers, enhanced printing reports and Export to Web Album feature.*

December 14, 2008 - Proxima Software today has announced the release of FontExpert 2009 version 10.0 font manager for Windows.

This release incorporates many new enhancements including:

- Create Font Library feature classifies fonts and organizes folders by font family classes;
- Backup/Restore FontExpert database with keywords and categories and Font Groups. Allows to exchange backup between XP and Vista computers;
- New printing and print preview with customizable reports;
- Enhanced Export to HTML feature creates A-Z html album, supports drop shadow in font samples;
- Search by Panose properties, by Font Properties, by Foundry, by Vendor ID in Database Search view;
- Search for Panose matches (search for similar fonts);
- Better performance when processing large number of fonts;
- Anti-aliased drawing of font samples;
- Now FontExpert does not require to start it "As Administrator" on Windows Vista and Windows Vista x64 Edition;
- Other enhancements.

The complete list and description of new features can be found in the release notes for the product, found on the company's website, [www.proximasoftware.com/fontexpert](http://www.proximasoftware.com/fontexpert).
